The album received generally positive reviews from music critics. Stephen Thomas Erlewine from AllMusic wrote that Braxton's "vocal talent is what unites Secrets and makes it into a first-rate contemporary R&B collection. Braxton is a singer who can cross over into the smooth confines of adult contemporary radio without losing or betraying the soul that lies at the foundation of her music, and ...

and hard-coded passwords, and left them open to attack. Yet it's not all doom and gloom. Antivirus software is quite good at finding viruses (or, at least, things that look like viruses—we don't know what viruses look like in nature) and then execute the automatic program to delete the virus and restore normalcy. This deletion routine is unique per virus, but it is not hard to develop. Antivirus software has tens of thousands of signatures, each tuned to a particular virus. Companies release them within days of learning of a new virus. And as long as viruses propagate slowly, this is good enough. Most antivirus software automatically updates itself once a month. Until 1999, that was good enough.

E-mail propagation changed everything. The year 1999 gave us the Melissa Microsoft Word macro virus and the Worm.ExplorZip worm, and 2000 gave us the ILOVEYOU worm and its dozens of variants, but there are many others. This type of malware drives via e-mail and uses automatic e-mail features in software to replicate itself across the network. They mail themselves to people known to the infected host, enticing the recipients to open or run them. They don't propagate over weeks and months; they propagate in seconds.

The antivirus companies release updates that catch particular viruses as soon as they can, but if a virus can infect 10 million computers (one estimate [illegible] virus wasn't discovered for a couple of days? What if a worm just targeted
