This work concerns a process for the recovery of silica gel from blast furnace slag. It consists of a leaching of the slag with H_2SO_4 , separation of gypsum, precipitation of silica gel from the filtrate at pH 3.2, followed by the washing of the raw precipitate. The effect of the slag particle-size, the leaching time and the washing extent on the overall recovery yield and silica gel purity ...

Recovery of silica gel from blast furnace slag - ScienceDirect

Graphite: Synthetic and natural graphites represent highly ordered form of carbonaceous materials. Mainly due to cost and availability considerations, graphites are not used as reductants but are used in special applications such as electrodes for the arc furnace etc.

Reductant Characterisation and Selection - Implications

The Hum is a phenomenon, or collection of phenomena, involving widespread reports of a persistent and invasive low-frequency opera or singing, rumbling, or droning noise not audible to all people. Hums have been widely reported by national media in the UK and the United States. The Hum is sometimes prefixed with the name of a locality where the problem has been particularly publicized: e.g ...

The Hum - Wikipedia

Ventilation is the intentional introduction of ambient air into a space and is mainly used to control indoor air quality by diluting and displacing indoor pollutants; it can also be used for purposes of thermal comfort or dehumidification. The correct introduction of ambient air will help to achieve desired indoor comfort levels although the measure of an ideal comfort level varies from ...
