The brain is an organ that serves as the center of the nervous system in all vertebrate and most invertebrate animals. The brain is located in the head, usually close to the sensory organs for senses such as vision. The brain is the most complex organ in a vertebrate's body. In a human, the cerebral cortex contains approximately 14–16 billion neurons, and the estimated number of neurons in ...

Why do we think we're so bad at maths, when we're all - almost all - born with brain circuits specialised for numbers? Our ability to use numbers has been the key from taking us from the Stone Age to the Phone Age. Trade, science and technology would be impossible without this ability. Neuroscientist Brian Butterworth argues that we are all born with brain circuits specialised for numbers.

PERCEIVED STRESS SCALE by Sheldon Cohen The Perceived Stress Scale (PSS) is the most widely used psychological instrument for measuring the perception of stress. It is a measure of the degree to which situations in one's life are appraised as stressful. Items were designed to tap how unpredictable, uncontrollable, and overloaded respondents find their lives.
