Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

In biology, taxonomy (from Ancient Greek *τάξις* (*táxìs*), meaning 'arrangement', and *νόμος* (*nómos*), meaning 'method') is the science of defining and naming groups of biological organisms on the basis of shared characteristics. Organisms are grouped together into taxa (singular: taxon) and these groups are given a taxonomic rank; groups of a given rank can be aggregated to form a super-group of ...

Polarized light can be used to examine repeated or crystalline structures. In a manner similar to DIC, plane polarized light that passes through a specimen will interact with the specimen and change its plane of polarization, allowing light to be detected through an analyzer located above the specimen and oriented at 90 degrees to the initial plane of polarization (for a more complete ...

## Human Health | National Climate Assessment

Background Introduction. Traumatic brain injury (TBI) is a leading cause of disability throughout the world (CDC, 2011, Lozano et al., 2015, Rabinowitz and Levin, 2014). An estimated 3.2–5.3 million Americans (1.1–1.7%) live with long-term mental and/or physical impairments as a result of TBIs (). Due to an increase in patients surviving a TBI, it is imperative for novel treatments and ...
