

Chapter 11 Introduction To Genetics Vocabulary Review Page 126 Answer Key

Parent	The organism that produces offspring.
Purebred	An individual that produces offspring with the same traits as itself in a generation.
Cross	Mating a plant with pollen from another plant.
Offspring	Progeny that are cross-pollinated.
P1 (Parental)	Offspring of the parental generation.
F1 (First Filial)	Offspring of cross-pollinated offspring.
F2 (Second Filial)	Offspring of F1 offspring.
Factor	(DNA sequence) that controls a trait.
Gene	The physical units of a gene.
Allele	Offspring with two different alleles for the same gene.
Genotype	Genetic make-up (what alleles are present).
Phenotype	What trait is expressed as when a particular allele is present.
Recessive	Allele that is only expressed if that same allele is present.
Dominant	Allele that is expressed if that same allele is present.
Blended	The expressed physical traits or appearance of an organism.
Heredity	The alleles that are present in an organism's genome.
Homozygous	An organism with two identical alleles.
Heterozygous	An organism with two different alleles for a given trait.

Chapter 11 Introduction To Genetics Vocabulary Review Page 126 Answer Key

Parental	Parents that provide offspring with the same type of trait as themselves.
Offspring	Offspring of a cross.
Genotype	The genetic makeup of an organism.
Phenotype	The physical appearance of an organism.
Allele	A variant form of a gene.
Gene	A segment of DNA that codes for a specific trait.
Chromosome	A structure made of DNA and proteins that carries genes.
Dominant	A trait that is expressed in the presence of one or two copies of the allele.
Recessive	A trait that is only expressed when two copies of the allele are present.
Carrier	An individual who has one copy of a recessive allele but does not show the trait.
Genetic cross	A mating between two individuals to study the inheritance of a trait.
Punnett square	A diagram used to predict the probability of offspring genotypes and phenotypes from a genetic cross.
Probability	The chance that a particular event will occur.
Genetics	The study of heredity and the variation of inherited traits.
Evolution	The change in the characteristics of a population over time.
Adaptation	A trait that helps an organism survive in its environment.
Natural selection	The process by which organisms better adapted to their environment tend to survive and produce more offspring.
Speciation	The formation of new and distinct species over time.
Extinction	The disappearance of a species.
Biological diversity	The variety of life forms in a given area.
Conservation	The protection and preservation of natural resources.
Endangered	A species that is at risk of extinction.
Extinct	A species that no longer exists.
Preservation	The protection and maintenance of natural resources.
Recreation	Activities that provide enjoyment and relaxation.
Wildlife	Animals and plants that live in their natural habitats.
Wilderness	Large areas of land that are protected from human development.
Wildlife management	The study and practice of managing wildlife populations.
Wildlife conservation	The protection and preservation of wildlife and their habitats.
Wildlife education	The process of teaching people about wildlife and conservation.
Wildlife research	The study of wildlife and their behavior.
Wildlife management	The study and practice of managing wildlife populations.
Wildlife conservation	The protection and preservation of wildlife and their habitats.
Wildlife education	The process of teaching people about wildlife and conservation.
Wildlife research	The study of wildlife and their behavior.

Chapter 11 Introduction To Genetics Vocabulary Review Page 126 Answer Key

Autosomes	Chromosomes that are not sex chromosomes
Chromosomes	Coiled structures of DNA and proteins that carry genes
Centromere	The point where two sister chromatids are joined
Cytokinesis	The process of cell division that results in two daughter cells
Diploid	Having two sets of chromosomes
Dominant	A trait that is expressed in the heterozygous state
Genotype	The genetic makeup of an organism
Homozygous	Having two identical alleles for a trait
Heterozygous	Having two different alleles for a trait
Phenotype	The observable characteristics of an organism
Punnett square	A diagram used to predict the probability of an offspring having a particular trait
Recessive	A trait that is only expressed in the homozygous state
Sex chromosomes	Chromosomes that determine the sex of an organism
Tetraploid	Having four sets of chromosomes
Triplet repeat	A sequence of three nucleotides that is repeated multiple times in a gene
Wild type	The most common form of a gene or trait
X-linked	A trait that is carried on the X chromosome
Y-linked	A trait that is carried on the Y chromosome
Zygote	The cell formed by the fusion of two gametes
