Electromagnetism is a branch of physics involving the study of the electromagnetic force, a type of physical interaction that occurs between electrically charged particles. The electromagnetic force usually exhibits electromagnetic fields such as electric fields, magnetic fields, and light, and is one of the four fundamental interactions (commonly called forces) in nature.

Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.

Overview. HyperLynx's Full-Wave Solver delivers unprecedented speed and capacity, through accelerated boundary element technology, while preserving gold-standard Maxwell accuracy. Achieve greater accuracy and fewer re-spins, even on the most complex structures. Designers can take advantage of high speed, accuracy and capacity for signal integrity, power integrity and EMI concerns – all from ...

The paper reviews the application of deterministic-stochastic models in some areas of computational electromagnetics. Namely, in certain problems there is an uncertainty in the input data set as some properties of a system are partly or entirely unknown. Thus, a simple stochastic collocation (SC) method is used to determine relevant statistics about given responses.

So the layman will need to understand that there is a new kind of electromagnetic energy that is altogether different from what he knows, e.g. radio, TV, cell phones, etc. The ordinary EM waves that we have known about are called transverse EM waves, to distinguish them from the new longitudinal EM waves. These scalar waves do not actually exist in our "material" world, but exist only in the ...

Cartesian Co-ordinate System : A point  $P(x, y, z)$  in Cartesian co-ordinate system is represented as intersection of three planes  $x = \text{constant}$ ,  $y = \text{constant}$  and  $z = \text{constant}$ , as shown in the figure below. The unit vectors along the three axes are as shown in the figure. Coordinate system represented by  $(x,y,z)$  that are three orthogonal vectors in straight lines that intersect at

If a someone is to help you understand FRACTAL FIELDS- centripetal life force and biologic rejuvenation ( commercial proof it works: theraphi.net)- you will definitely need a scientist who knows why an object falls to the ground (thus excluding Einstein and Stephen Hawkins).Gravity is a centripetal electrical force.
