As a simple illustration, Table 1 gives the ratings of images obtained from 109 subjects by a radiologist. 2, 3 Multiple cutpoints are possible for classifying a patient as normal or abnormal based on the image ratings. Suppose that ratings of 4 or above indicate, for instance, that the test is positive (abnormal), then the sensitivity and specificity would be 0.86 (44/51) and 0.78 (45/58 ...

### Receiver Operating Characteristic Curve in Diagnostic Test

The randomized controlled trial is one of the simplest but most powerful tools of research. In essence, the randomized controlled trial is a study in which people are allocated at random to receive one of several clinical interventions []. On most occasions, the term "intervention" refers to treatment, but it should be used in a much wider sense to include any clinical maneuver offered to ...
