General-purpose computing on graphics processing units (GPGPU, rarely GPGP) is the use of a graphics processing unit (GPU), which typically handles computation only for computer graphics, to perform computation in applications traditionally handled by the central processing unit (CPU). The use of multiple video cards in one computer, or large numbers of graphics chips, further parallelizes the ...

General-purpose computing on graphics processing units

The story of computing at Columbia is presented chronologically. Most links are to local documents, and therefore will work as long as all the files accompanying this document are kept together.

Computing at Columbia Timeline

Core technologies and tools for AI, big data, and cloud computing. Highlights and use cases from companies that are building the technologies needed to sustain their use of analytics and machine learning.

Ideas - O'Reilly Media

Computers and computing devices from different eras. A computer is a device that can be instructed to carry out sequences of arithmetic or logical operations automatically via computer programming. Modern computers have the ability to follow generalized sets of operations, called programs. These programs enable computers to perform an extremely wide range of tasks.

In programming, algorithms perform specific functions to complete required tasks. Introduction to Algorithms, part of the Foundations of Programming course, will provide you with the fundamentals of using algorithms in programming. Simon also demonstrates the choices developers have of using different algorithms to accomplish the same tasks.

Full disclosure: although I am an employee of Pearson Technology Group, I was a paid subscriber of Safari Books Online for a number of years prior to my full-time appointment with PTG. Therefore, the introduction to Safari Books Online that I am about to give you is derived from my true enthusiasm for the service and not from a desire to stuff from marketing copy down your throats.
