Sickle cell anemia is an inherited disorder that leads to the production of an abnormal type of hemoglobin called hemoglobin S (Hb S or Hgb S). Sickle cell tests determine the presence and relative amount of hemoglobin S in a blood sample or detect mutations in the genes that produce hemoglobin to help diagnose sickle cell anemia and/or identify people with sickle cell trait.

Why is a hearing test so important for my baby? The ability to hear is the foundation of your baby's ability to learn, so it's important to identify any problems just as soon as possible. That's why experts recommend that your baby's hearing be screened before he leaves the hospital. In fact, most ...
