Biopharmaceutical -Omes & -omics glossary taxonomy

Abstract. Bacterial infections are associated with many autoimmune diseases involving chronic inflammation and demyelination. The possible mechanisms of bacterial involvement as aetiological agents or in the exacerbation of these diseases have been investigated intensively.

Bacterial Infections and the Pathogenesis of Autoimmune

1. Introduction. Breast cancer cell invasion through the stroma is influenced by signals the breast cancer cells receive from the microenvironment, including the extracellular matrix (ECM), mechanical properties, stromal cells, and cytokines, among others [, , ,]. Of particular interest are gradients of chemoattractants (often cytokines) that arise in the microenvironment and guide cell ...
