In computing, a word is the natural unit of data used by a particular processor design. A word is a fixed-sized piece of data handled as a unit by the instruction set or the hardware of the processor. The number of bits in a word (the word size, word width, or word length) is an important characteristic of any specific processor design or computer architecture.

Complex Documents - Microsoft Word Intermediate User's Guide. Tables of Contents generated by Word are fields. Specifically, a TOC field. The simplest way to create such a field is to type the letters "TOC" and select them, then press Ctrl+F9 to make it a field. (It will look like {TOC }.)Then press F9 to update the field. That gives you a table of contents for outline levels 1-9.
